Journal of Fluid Mechanics **Volume 322 10 September 1996**

M. Ioualalen, A. J. Roberts & C. Kharif On the observability of finite-depth short-crested water waves *page* 1

C. K. Chyu & D. Rockwell Near-wake structure of an oscillating cylinder: effect of controlled shear-layer vortices 21

G. C. R. Bodstein, A. R. George & C.-Y. Hui The three-dimensional interaction of a streamwise vortex with a large-chord lifting surface: theory and experiment 51

A. Gnanadesikan Mixing driven by vertically variable forcing: an application to the case of Langmuir circulation 81

L. A. Romero & F. G. Yost Flow in an open channel capillary 109

J. Miles Surface-wave generation: a viscoelastic model 131

A. Goldshtein, P. Vainshtein, M. Fichman & C. Gutfinger Resonance gas oscillations in closed tubes 147

H. Hanazaki On the wave excitation and the formation of recirculation eddies in an axisymmetric flow of uniformly rotating fluids 165

D. A. Nield, S. L. M. Junqueira & J. L. Lage Forced convection in a fluid-saturated porous-medium channel with isothermal or isoflux boundaries 201

D. Barkley & R. D. Henderson Three-dimensional Floquet stability analysis of the wake of a circular cylinder 215

K. Julien, S. Legg, J. McWilliams & J. Werne Rapidly rotating turbulent Rayleigh–Bénard convection 243

H. G. Im, B. T. Helenbrook, S. R. Lee & C. K. Law Ignition in the supersonic hydrogen/air mixing layer with reduced reaction mechanisms 275

A. E. Alving & H. H. Fernholz Turbulence measurements around a mild separation bubble and downstream of reattachment 297

C.-Y. Li & S. L. Ceccio Interaction of single travelling bubbles with the boundary layer and attached cavitation 329

E. Schatzman Diffusion process produced by random internal waves 355

S. T. Thoroddsen & C. W. Van Atta Experiments on density-gradient anisotropies and scalar dissipation of turbulence in a stably stratified fluid 383
